Skills

Microsoft Excel • Data Visualization and Presentation • Azure DevOps • Power BI • SQL • Python • R • Project Management • Project Reporting • Enterprise Risk Management • FCPA & SOX Compliance • Risk & Compliance Management • Tableau • Business Analysis • Data analysis using GenAI

Experience

Protiviti	
Consultant	01/2025 - 06/2025
- Led a team of eight individuals to develop and refine Enterprise Risk Management (ERM) frameworks, integrating risk management into clients' strategic planning and decision-making processes, helping mitigate, monitor, and report potential risks. - Developed and optimized a project tracking solution using Azure DevOps, enabling real-time data visibility and driving efficiency across project engagements. - Conducted quantitative analysis on operational workflows to identify 30+ process inefficiencies, recommending data-driven solutions that improved operating effectiveness by 30%.	
Protiviti	
Junior Consultant	09/2023 - 12/2024
- Performed comprehensive data validation and operational testing on 70+ business controls for a Fortune 10 Client, analyzing datasets to ensure alignment with regulatory standards. - Collaborated with cross-functional stakeholders to optimize business processes, analyzing project metrics to ensure a 97% on-time completion rate and drive revenue growth. - Collaborated with senior leadership to implement data-driven corrective actions, delivering comprehensive reports that highlighted future revenue potential and mitigated regulatory risks.	

Projects

CAVA Growth Strategy: Mediterranean Fast-Casual Expansion
- Developed a 3-5 year national growth strategy for CAVA using Excel to aggregate and analyze demographic density data, identifying high-potential Texas and Florida markets with HHI 11-24% above state medians. - Conducted competitive benchmarking against Chipotle and Sweetgreen, positioning CAVA's value-for-money offering as a key driver for customer acquisition. - Built a supply chain optimization model in Python to design a 'Sustainable Moat' strategy, leveraging vertical integration to enable 14% underpricing versus industry inflation.
Obesity Level Prediction & Lifestyle Analysis
- Developed a multi-class Random Forest classification engine using SMOTE to address class imbalance, achieving 95.3% accuracy and 98% recall for high-risk groups. - Implemented Unsupervised K-Means Clustering (Silhouette Score: 0.42) to segment patient profiles, identifying Vegetable Consumption and Meal Frequency as the top predictive factors.
